

STATE REPORT

09.06.2020

ILLINOIS

SUMMARY

- Illinois is in the red zone for cases, indicating more than 100 new cases per 100,000 population last week, with the 13th highest rate in the country. Illinois is in the yellow zone for test positivity, indicating a rate between 5% and 10%, with the 29th highest rate in the country.
- Illinois has seen an increase in new cases and stability in test positivity over the last week.
- The following three counties had the highest number of new cases over the past 3 weeks: 1. Cook County, 2. DuPage County, and 3. Will County. These contiguous counties in the Chicago CBSA represent 45.9% of new cases in Illinois. Viral transmission is widely distributed in Illinois with the highest incidences reported outside of the Chicago CBSA from multiple counties in mid and southern Illinois.
- 60% of all counties in Illinois have moderate or high levels of community transmission (yellow or red zone), with 15% having high levels of community transmission (red zone).
- Illinois State University (McLean County) has reported approximately 1,300 positive tests among students since Aug 17, including 549 in the 7 days to Sep 5; 7-day test positivity rate was 19.7%. McLean County reported a 7-day incidence exceeding 500 per 100,000 population. University of Illinois at Urbana-Champaign imposed a 2-week near lockdown after a surge of cases linked to large parties.
- During the week of Aug 24 – Aug 30, 10% of nursing homes had at least one new resident COVID-19 case, 19% of nursing homes had at least one new staff COVID-19 case, and 3% of nursing homes had at least one new resident COVID-19 death.
- Illinois had 125 new cases per 100,000 population in the last week, compared to a national average of 88 per 100,000.
- Current staff deployed from the federal government as assets to support the state response are: 66 to support operations activities from FEMA; 6 to support operations activities from ASPR; 1 to support epidemiology activities from CDC; and 7 to support operations activities from USCG.
- Between Aug 29 - Sep 04, on average, 114 patients with confirmed COVID-19 and 432 patients with suspected COVID-19 were reported as newly admitted each day to hospitals in Illinois. An average of 92% of hospitals reported either new confirmed or new suspected COVID patients each day during this period; therefore, this may be an underestimate of the actual total number of COVID-related hospitalizations. Underreporting may lead to a lower allocation of critical supplies.

RECOMMENDATIONS

- Using the Abbott BinaxNOW, establish weekly surveillance in critical populations to monitor degree of community spread among K-12 teachers; staff working at nursing homes, assisted living, and other congregate living settings; and first responders.
- Recommendations specific to institutions of higher education (IHE) are highlighted below given the concerning trends nationally and the need to intensify efforts to control COVID-19 among university students and minimize spread to local communities.
- IHE should increase testing capacity by expanding public-private partnerships; increasing the budget and capacity of public health labs; pooling specimens where appropriate; and utilizing all university, veterinary and research platforms for surveillance and testing of students and, if needed, the surrounding communities.
- Require all universities and colleges to have a plan for both rapid testing and contact tracing of symptomatic students and periodic surveillance testing of students, with quick turnaround times for results, and rapid isolation of cases and quarantine of contacts; residential cases and contacts should not be sent home to isolate or quarantine.
- Recruit college and university students to expand public health messaging and contact tracing capacity and protect local communities by strict mask wearing and social distancing off campus.
- Universities and colleges must work with various student leaders and campus media to support compliance with recommendations.
- Explore use of focused wastewater surveillance to detect cases early and to direct diagnostic testing and public health interventions.
- University students with or exposed to COVID-19 must have isolation, quarantine and care sites on or near campus and not be returned home to multigenerational households where additional transmission could occur.
- Ensure all universities can fully test, isolate, and conduct contact tracing in collaboration with local public health authorities. Support university officials in messaging to students about the importance of full cooperation.
- Ensure all nursing homes, assisted living, and elderly care sites follow CMS staff testing requirements and, if cases within local universities rise, increase testing even further to prevent spread from students to residents through staff. Expanding nursing home cases must be controlled with aggressive testing of all staff and isolation of positive residents.
- Support local authorities in outreach to restaurant and bar business owners in college communities regarding enforcement of masking and limitations on occupancy as well as other limitations on student patronage; encourage local ordinances in these communities to allow enforcement of social distancing and mask mandates for off-campus events.
- Support a uniform case-reporting process for IHE and reporting of this data on university public-facing dashboards.
- Consider development of plans and procedures for deployment of Joint Response and Assessment Teams to identified hot spots or critical areas (e.g., long-term care facilities, hospitals). These teams should be developed collaboratively leveraging the capabilities of local, state, and private sector organizations, contracted services and volunteer resources. They should be able to provide rapid assessment and surge capacity, including stabilizing or augmenting on-site operations.
- Specific, detailed guidance on community mitigation measures can be found on the [CDC website](#).

The purpose of this report is to develop a shared understanding of the current status of the pandemic at the national, regional, state and local levels. We recognize that data at the state level may differ from that available at the federal level. Our objective is to use consistent data sources and methods that allow for comparisons to be made across localities. We appreciate your continued support in identifying data discrepancies and improving data completeness and sharing across systems. We look forward to your feedback.

COVID-19

ILLINOIS

STATE REPORT | 09.06.2020

	STATE, LAST WEEK	STATE, % CHANGE FROM PREVIOUS WEEK	FEMA/HHS REGION, LAST WEEK	UNITED STATES, LAST WEEK
NEW COVID-19 CASES (RATE PER 100,000)	15,888 (125)	+17.2%	47,030 (90)	290,363 (88)
VIRAL (RT-PCR) LAB TEST POSITIVITY RATE	5.1%	+0.0%*	4.9%	5.2%
TOTAL VIRAL (RT-PCR) LAB TESTS (TESTS PER 100,000)	328,400** (2,592)	+4.8%**	1,120,142** (2,132)	5,652,360** (1,722)
COVID-19 DEATHS (RATE PER 100,000)	145 (1)	+2.8%	526 (1)	5,963 (2)
SNFs WITH ≥ 1 NEW RESIDENT COVID-19 CASE $(\geq 1$ NEW STAFF CASE)	10% (19%)	-1%* (-3%*)	8% (15%)	10% (17%)
SNFs WITH ≥ 1 NEW RESIDENT COVID-19 DEATH	3%	+0%*	3%	5%

MOBILITY

* Indicates absolute change in percentage points.

** Due to delayed reporting, this figure may underestimate total diagnostic tests and week-on-week changes in diagnostic tests.

DATA SOURCES – Additional data details available under METHODS**Note:** Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes.**Cases and Deaths:** State values are calculated by aggregating county-level data from USAFacts; therefore, the values may not match those reported directly by the state. Data is through 9/4/2020; last week is 8/29 - 9/4, previous week is 8/22 - 8/28.**Testing:** CELR (COVID-19 Electronic Lab Reporting) state health department-reported data through 9/2/2020. Last week is 8/27 - 9/2, previous week is 8/20 - 8/26.**Mobility:** Descartes Labs. This data depicts the median distance moved across a collection of mobile devices to estimate the level of human mobility within a county. The 100% represents the baseline mobility level prior to the pandemic; lower percent mobility indicates less population movement. Data is anonymized and provided at the county level. Data through 9/4/2020.**SNFs:** Skilled nursing facilities. National Healthcare Safety Network. Data are reported separately for cases among residents and staff. Last week is 8/24-8/30, previous week is 8/17-8/23.

ILLINOIS

STATE REPORT | 09.06.2020

COVID-19 COUNTY AND METRO ALERTS*

Top 12 shown in table (full lists below)

LOCALITIES IN RED ZONE

LOCALITIES IN YELLOW ZONE

METRO AREA (CBSA) LAST WEEK	4	Bloomington Jacksonville Fort Madison-Keokuk Cape Girardeau	20	Chicago-Naperville-Elgin St. Louis Peoria Carbondale-Marion Davenport-Moline-Rock Island Rockford Charleston-Mattoon Ottawa Kankakee Effingham Decatur Sterling
COUNTY LAST WEEK	15	McLean Clinton Morgan Bureau Monroe Grundy Lawrence Jasper Greene Cass Crawford Wabash	46	Cook Will Kane Madison St. Clair Peoria McHenry Winnebago Tazewell Coles Williamson Rock Island

All Yellow CBSAs: Chicago-Naperville-Elgin, St. Louis, Peoria, Carbondale-Marion, Davenport-Moline-Rock Island, Rockford, Charleston-Mattoon, Ottawa, Kankakee, Effingham, Decatur, Sterling, Mount Vernon, Centralia, Macomb, Lincoln, Rochelle, Dixon, Burlington, Paducah

All Red Counties: McLean, Clinton, Morgan, Bureau, Monroe, Grundy, Lawrence, Jasper, Greene, Cass, Crawford, Wabash, Pulaski, Stark, Schuyler

All Yellow Counties: Cook, Will, Kane, Madison, St. Clair, Peoria, McHenry, Winnebago, Tazewell, Coles, Williamson, Rock Island, Kankakee, LaSalle, Effingham, Macon, Randolph, Jackson, Kendall, Henry, DeKalb, Whiteside, Jersey, Jefferson, Shelby, Marion, Boone, McDonough, Fayette, Bond, Logan, Union, Douglas, Cumberland, Ogle, Hancock, Lee, Moultrie, Warren, Edgar, Washington, Wayne, Richland, Pike, Saline, Henderson

* Localities with fewer than 10 cases last week have been excluded from these alerts.

Red Zone: Those core-based statistical areas (CBSAs) and counties that during the last week reported both new cases above 100 per 100,000 population, and lab test positivity result above 10%.

Yellow Zone: Those CBSAs and counties that during the last week reported both new cases between 10-100 per 100,000 population, and a lab test positivity result between 5-10%, or one of those two conditions and one condition qualifying as being in the "Red Zone."

Note: Lists of red and yellow localities are sorted by the number of new cases in the last 3 weeks, from highest to lowest. Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes.

DATA SOURCES – Additional data details available under METHODS

Cases and Deaths: State values are calculated by aggregating county-level data from USAFacts; therefore, the values may not match those reported directly by the state. Data is through 9/4/2020; last week is 8/29 - 9/4, three weeks is 8/15 - 9/4.

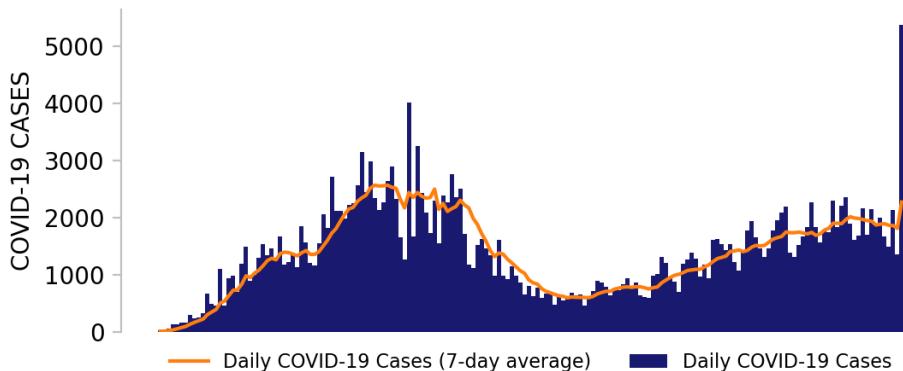

Testing: CELR (COVID-19 Electronic Lab Reporting) state health department-reported data through 9/2/2020. Last week is 8/27 - 9/2.

DATA SOURCES

Note: Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes.

Testing: Combination of CELR (COVID-19 Electronic Lab Reporting) state health department-reported data and HHS Protect laboratory data (provided directly to Federal Government from public health labs, hospital labs, and commercial labs) through 9/2/2020. Last week is 8/27 - 9/2; the week one month before is 7/30 - 8/5.

METHODS

STATE REPORT | 09.06.2020

COLOR THRESHOLDS: Results for each indicator should be taken in context of the findings for related indicators (e.g., changes in case incidence and testing volume)

Metric	Green	Yellow	Red
New cases per 100,000 population per week	<10	10-100	>100
Percent change in new cases per 100,000 population	<-10%	-10% - 10%	>10%
Diagnostic test result positivity rate	<5%	5%-10%	>10%
Change in test positivity	<-0.5%	-0.5%-0.5%	>0.5%
Total diagnostic tests resulted per 100,000 population per week	>1000	500-1000	<500
Percent change in tests per 100,000 population	>10%	-10% - 10%	<-10%
COVID-19 deaths per 100,000 population per week	<1	1-2	>2
Percent change in deaths per 100,000 population	<-10%	-10% - 10%	>10%
Skilled Nursing Facilities with at least one resident COVID-19 case, death	<1%	1%-5%	>5%
Change in SNFs with at least one resident COVID-19 case, death	<-1%	-1%-1%	>1%

DATA NOTES

- Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes. It is critical that states provide as up-to-date data as possible.
- Cases and deaths:** County-level data from USAFacts as of 22:00 EDT on 09/06/2020. State values are calculated by aggregating county-level data from USAFacts; therefore, values may not match those reported directly by the state. Data are reviewed on a daily basis against internal and verified external sources and, if needed, adjusted. Last week data are from 8/29 to 9/4; previous week data are from 8/22 to 8/28; the week one month before data are from 8/1 to 8/7.
- Testing:** The data presented represent viral COVID-19 laboratory diagnostic and screening test (reverse transcription polymerase chain reaction, RT-PCR) results—not individual people—and exclude antibody and antigen tests. CELR (COVID-19 Electronic Lab Reporting) state health department-reported data are used to describe county-level viral COVID-19 laboratory test (RT-PCR) result totals when information is available on patients' county of residence or healthcare providers' practice location. HHS Protect laboratory data (provided directly to Federal Government from public health labs, hospital labs, and commercial labs) are used otherwise. Some states did not report on certain days, which may affect the total number of tests resulted and positivity rate values. Because the data are deidentified, total viral (RT-PCR) laboratory tests are the number of tests performed, not the number of individuals tested. Viral (RT-PCR) laboratory test positivity rate is the number of positive tests divided by the number of tests performed and resulted. Resulted tests are assigned to a timeframe based on this hierarchy of test-related dates: 1. test date; 2. result date; 3. specimen received date; 4. specimen collection date. Resulted tests are assigned to a county based on a hierarchy of test-related locations: 1. patient residency; 2. provider facility location; 3. ordering facility location; 4. performing organization location. States may calculate test positivity other using other methods. Last week data are from 8/27 to 9/2; previous week data are from 8/20 to 8/26; the week one month before data are from 7/30 to 8/5. HHS Protect data is recent as of 11:30 EDT on 09/06/2020. Testing data are inclusive of everything received and processed by the CELR system as of 19:00 EDT on 09/05/2020.
- Mobility:** Descartes Labs. These data depict the median distance moved across a collection of mobile devices to estimate the level of human mobility within a locality. The 100% represents the baseline mobility level prior to the pandemic; lower percent mobility indicates less population movement. Data is anonymized and provided at the locality level. Data is recent as of 13:00 EDT on 09/06/2020 and is through 9/4/2020.
- Hospitalizations:** Unified hospitalization dataset in HHS Protect. This figure may differ from state data due to differences in hospital lists and reporting between federal and state systems. These data exclude psychiatric, rehabilitation, and religious non-medical hospitals. In addition, hospitals explicitly identified by states/regions as those from which we should not expect reports were excluded from the percent reporting figure. The data presented represents raw data provided; we are working diligently with state liaisons to improve reporting consistency. Data is recent as of 15:00 EDT on 09/06/2020.
- Skilled Nursing Facilities:** National Healthcare Safety Network (NHSN). Data report resident and staff cases independently. Quality checks are performed on data submitted to the NHSN. Data that fail these quality checks or appear inconsistent with surveillance protocols may be excluded from analyses. Data presented in this report are more recent than data publicly posted by CMS. Last week is 8/17-8/23, previous week is 8/24-8/30.
